

Individual Web Project – HTML – 100 points

DUE November 6 by 11:30 PM

Project outline:

The owners of a newly restored old-time classic movie theater have contracted you to create a website. The theater will have a grand opening in December, 2022. This theater is the Regal Cinema and it shows classic movies at 7:00 pm Friday - Sunday. On Saturday – Sunday they add matinee showings at 1:00 pm and 3:30 pm. The movie theater is located at:

1200 W St German St, St Cloud, Minnesota 56303

They would like you create a website that has at least 4 pages. On the home page (index.html) they would like to have a photo of the theater and some basic information that the owners will provide. Also on the home page they want a small map for directions. When the user clicks View Larger Map on this map the owners would like to **redirect** the user to the Google maps website for the theater, but in a **new window or tab**, they don't want the user to be taken away from the main website. (How to embed map from Google maps -

<http://maps.google.com/support/bin/answer.py?hl=en&answer=72644>

They also want 3 other pages. The first page will be about the concessions. The second will be the schedule of movies for a month. The third will be an online form to purchase movie tickets.

They want the user to be able to navigate to any page from any other page. They want the navigation to look the same on all the pages so the user doesn't get confused.

Appropriate CSS should be used so all the pages have the same look and feel. You are required to use external CSS elements that style the **text**, **layout** and **links**. It is optional if you wish to create additional embedded or inline CSS elements.

Multimedia is optional, but the owners said it might be nice to have some short clips of the films available.

- The text of the home page should read:

"Welcome to the Regal Theater. We are proud of our classic movie palace, and we think you will be impressed by it as well. Restored to its original splendor, meticulously maintained, and fully upgraded to modern technical standards, the Regal Theater needs to be seen to be truly appreciated. Please come and enjoy a classic movie in a classic theater. We will celebrate our Grand Opening on Friday, December 2, 2022 with be a screening of the 1942 classic *Casablanca*. Please check our schedule of other classic films being shown in December."

- The text of the concessions page should read:

"We pop all our popcorn fresh in front you and use the highest quality gourmet popcorn. We serve fresh hot dogs and the finest selection of candy items. Make sure to sample our famous fresh squeezed lemonade available in both classic and raspberry flavors.

Check out our specials. On Friday we have 1 dollar hot dogs. On Saturday we have buy one get one free on all candy priced over \$3. On Sunday we have buy one get one free popcorn."

- The text of the schedule page should have the following information:

Dec 2 - 4 – *Casablanca* (no matinee showing the first weekend);

Dec 9 – 11 – *Star Wars* (matinee showing: *Iron Giant*)

Dec 16 – 18 – *It's a Wonderful Life* (matinee showing: *Miracle on 34th Street*)

Dec 23 – Dec 25 – *The Wizard of Oz* (matinee showing: *A Christmas Story*)

This page should use a table, and this table should be formatted with CSS. Design the table to look like a monthly wall calendar. It should be clear what movies are playing at what time.

- The information for the ticket purchasing is:

Grand Opening tickets are 10 dollars

Evening showings are 7 dollars

Matinee showings are 4 dollars

The ticket form should collect the following information:

First Name, Last Name, Phone, Street Address, City, State, Zip, Credit Card (options: AMEX, Mastercard, Visa, Discover), Cardholder Name, Card Number (hidden field), Expiration Date, Mailing List (radio button options yes/no). There should also be a comments section that has a textarea of 5 rows by 50 columns. Make sure you have a way for the individual to select how many tickets they want to order and what type of tickets they want.

Some sample image files are on the D2L website for this course. You must use a logo of some sort on the index.html page. You can use the additional ones provided or find some other to use. Each page should have at least one image file. Do not use spaces in your filename, all filenames should be lower case.

- The project will be graded on:

Completeness – Does the site have a consistent style throughout and not look thrown together.

Correct coding / functionality - Does everything work? Are there coding errors? Is the code properly indented?

Typos, errors and html / css misuse will lose you points.

Requirements – Does the site meet all the requirements listed above.
